

MFS SKIRT

Maximum Flex Skirt

**FLEXIBLE
AND IMPACT
RESISTANT**

**WE DESIGN
OUR PRODUCTS**
to save you money

Up to 7% fuel economy on
highway

Easy installation on all
semi-trailers

Most impact resistant and
resilient product in the market

Lightweight reinforced
thermoplastic composite
panel and structure

6 month payback

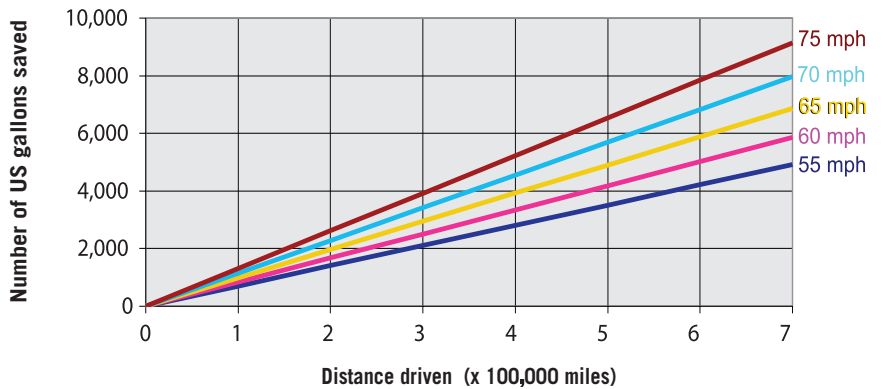

*This skirt will
last the lifetime of your trailer...*

TRANSIEX
COMPOSITE

Considerable savings

The MFS skirt offers truck operators even more fuel savings than those obtained by using only front air deflectors. Savings produced on road tests have been well documented in several trade publications.

Fuel savings in relation to the number of miles driven

- Saves 0.84 US gal. of fuel every 100 miles when travelling at 60 mph;
- Increases the driver's visibility along the sides of the vehicle due to reduced splashing;
- Quickly and easily installed (minimum number of parts);
- Proven durability in winter conditions, resistant to snow and ice accumulation;
- Flexible reinforced thermoplastic panels are impact resistant.

Our patent pending resilient support design enables the Transtex MFS skirt to flex easily to prevent damages should it collide against an obstacle.
